

PIABC LEVEL 2 EXTENDED DIPLOMA IN POLYMER OPERATIONS

(Qualification Number: 603/3796/5)

Qualification Specification

Updated: 19 July 2023

PURPOSE

The regulated qualification PIABC Level 2 Extended Diploma in Polymer Operations (QN: 603/3796/5) has been designed for learners working in the polymer operations and related sectors. The main purpose of the qualification is to provide industry specific knowledge and skills appropriate for the day to day activities of the polymer operations environment.

It is expected that courses leading to the qualification will take a minimum of 49 guided learning hours, which is the average hours a learner may require guidance and support from teaching, learning and assessment professional to achieve the qualification. Learners will also be expected to carry out additional reading and other work to complete each unit and prepare for assessment. It is anticipated that the qualification will require a minimum of 495 hours of total qualification time for satisfactory completion for an average learner.

This qualification has been designed to be taken alongside the Level 2 Apprenticeship Standard – Science Manufacturing Process Operative to provide the theoretical knowledge required by an apprentice. Although this standard does not require an apprentice to undertake any additional qualification to successfully show competency in the science manufacturing process operative occupation, but it an option for employers for their apprentices.

OUTCOMES

1. Provide and enhance the skills competency, knowledge and job satisfaction of learners - providing them with a means of progression to higher level job roles and qualifications.
2. Provide employers with an open and transparent basis for judging the suitability of learners for employment and promotion.
3. Facilitate job movement throughout the polymer processing industry and related sectors.

Specific outcomes for the qualification are listed under the individual unit description.

TARGET GROUP

This Level 2 qualification is appropriate for those wanting to enhance their employment and progression opportunities in the polymer processing industry and relates sectors:

There are two broad target groups:

1. People within the industry who want to extend their knowledge and skills to gain a recognised qualification.
2. People within the industry who want to operate more professionally and effectively.

ENTRY REQUIREMENTS

There are no entry qualifications or age limits required for this qualification. But the PIABC Level 2 Extended Diploma in Polymer Operations (QN: 603/3796/5) is intended for those learners who are new to the industry.

Assessment for this qualification is open to any learner who has the potential to reach the standards laid down for level 2 qualifications. An initial assessment of past experience and current skills,

knowledge and understanding should be carried out prior to commencement, to determine suitability for this qualification.

Aids or appliances, which are designed to alleviate disability, may be used during assessment, providing they do not compromise the standard required.

PROGRAMME ORGANISATION

Programmes leading to the PIABC Level 2 Extended Diploma in Polymer Operations (QN: 603/3796/5) can be organised and delivered by providers who have gained centre and qualification approval from PIABC. To achieve this, they need to complete the PIABC centre and qualification approval procedures available from www.piabc.org.uk. In completing the documentation and the approval visit, centres need to demonstrate their ability to deliver high quality education leading to the qualification. Centres are expected to employ robust quality assurance processes. PIABC will appoint its own External Quality Assurers to ensure the effective operation of these processes and the maintenance of standards of quality.

It is anticipated that the qualification will require a total qualification time of 495 hours. This includes assessment, self-study and taught hours for satisfactory completion.

The organisation of the qualification is at the discretion of the centre and will take into account the aims, aspirations and experience of the learners.

Centres are encouraged to choose the most suitable curriculum model for their learners. Whilst the sequential delivery of parts of the unit is a possibility and may provide the most straightforward way of determining completion, it may be that some degree of integration of elements will occur, or that other methods of delivery are more appropriate to meet the needs of learners. It should be noted however that the whole unit and all the learning outcomes will be assessed.

Centres must ensure that adequate arrangements are in place for supporting learners. This could be either through separate tutorial sessions or through the use of time within structured study sessions. Centres using on-line or other forms of open learning must ensure that appropriate tutorial support is provided for learners.

The employer's engagement in learning and assessment opportunities will be paramount in securing timely achievement and a participative role should be encouraged.

In relevant circumstances, centres are recommended to provide information and guidance to their learners on the availability and type of employment the qualification may lead to and on the progression routes available for further education and training in polymer process industry and associate sectors.

EXTERNAL MODERATION

PIABC will appoint External Quality Assurers to visit centres in order to ensure the maintenance of standards of quality. The scope and frequency of assessment monitoring activities will be in part determined by the centre assessment standard strategy for this qualification. PIABC's monitoring strategy will ensure that all centre marked assessments remain fit for purpose and that criteria against which candidates' performance is differentiated are being accurately and consistently applied for this qualification regardless on assessor, candidate, or centre.

The focus of EQA for this qualification is the detailed examination of candidate evidence. The sample selection will be determined by PIABC in line with its centre assessment standard strategy and external quality assurance sampling policy for each cohort. During this exercise, the EQA will be able to agree to certification claims and sign off documentation relating to certification claims.

GUIDANCE ON LEARNING AND TEACHING STRATEGY, METHODS AND ASSESSMENT

As far as possible, it is important that the course is taught by relating the underlying theory to practical examples and applications. Two factors which will help in this regard are:

1. The use of staff with direct experience in the industry. This must, of course, be balanced against a sound understanding of the theoretical principles, as anecdotal experience alone is unlikely to meet the requirements of the course.
2. Practical and commercial examples that underpin a more theoretical understanding should be used to show the link between theory and practice. DVD illustrations of processes could also be used as part of the teaching regime. A further and invaluable source of information is the Internet and there are many web sites which demonstrate important aspects of timber processing and use. Learners should be encouraged to research this material.
3. Practical experience of workplace operations dealing with polymer processing and the individual learner's chosen pathway. It is essential that Learners are able to, and can demonstrate their skills and knowledge in their own work environment with its production pressures

Learners employed in the polymer processing industry will come to the qualification with varying levels of existing knowledge and/or practical experience of some parts of the Learning Outcomes. Training needs should be identified and gaps in knowledge and competency should be filled with a planned delivery of an individual learning plan. This should be utilised in preparing for teaching and assessment. The sharing of knowledge which has the potential to lead to a high level of understanding should be encouraged by the use of staff with direct experience in the polymer process industry - particularly in the individual learner's chosen pathway. This must, of course, be balanced against a sound understanding of the theoretical understanding.

Where the skills assessment is to be carried out in a "production environment" this environment must not be simulated. The assessment should take account of production pressure within a natural workplace.

The relationship between theory and practice is a theme that should be reflected in the assessments for the programme. Therefore, in structured learning and individual work, learners should be aware of the requirement to develop a theoretical understanding to their practical work and a practical application to their theoretical understanding.

Those developing learning programmes should expect to achieve all the learning outcomes. It may be useful to have workbooks for use either at home or in the workplace.

QUALIFICATION LEVEL

PIABC Level 2 Extended Diploma in Polymer Operations (QN: 603/3796/5) has been developed as a level 2 qualification. The assessments for this qualification are based on the learning outcomes and assessment criteria set in a way that demonstrates that the learner can show that they have the knowledge and skills associated with a level 2 qualification. It will prepare the learner to operate as a competent team member and will greatly assist them in their career development. When work for this qualification is assessed, it is important to realise that evidence will be sought which demonstrates these features below.

Level 2 Descriptor

Summary

The descriptors set out the generic knowledge and skills associated with the typical holder of a qualification at Level 2. The level descriptors are framed as outcomes and each category starts with a stem statement (“the holder can...”) which then links into the outcomes associated with each level of the framework.

Knowledge descriptor (the holder...)

- Has knowledge and understanding of facts, procedures and ideas in an area of study or field of work to complete well-defined tasks and address straightforward problems.
- Can interpret relevant information and ideas.
- Is aware of a range of information that is relevant to the area of study or work.

Skills descriptor (the holder...)

- Select and use relevant cognitive and practical skills to complete well-defined, generally routine tasks and address straightforward problems.
- Identify, gather and use relevant information to inform actions.
- Identify how effective actions have been.

QUALIFICATION STRUCTURE

Six mandatory units must be taken by the learner.

Unit DPO1 - Principles and Requirements of Polymer Processing

Unit DPO2 - Health, Safety and Environmental Principles when Operating Polymer Processes

Unit DPO3 - Quality, Process Control and Improvement Techniques used in Polymer Processing

Unit DPO4 - Prepare, Start Up and Shut Down a Polymer Process

Unit DPO5 - Basic Skills in Mathematics, Communication and Behaviour required in a Polymer Processing Environment

Unit DPO6 - Install and Prepare a Polymer Processing Forming Tool and Ancillary Equipment for Production

ASSESSMENT AND GRADING

ASSESSMENT AND GRADING

MANDATORY UNITS (DPO1, DPO2 and DPO3)

These units are assessed by completing assignments which are set, internally assessed and internally quality assured by the centre.

The assignments should be designed for a holistic approach to the assessment and confirm learners have a full contextualised understanding of all the assessment criteria.

Assignments must incorporate aspects and examples of the learner's own production environment; including policies, procedures, processes, equipment, and materials used. (Production environments must not be simulated for this unit).

Centre assignments and their management will be externally quality assured by PIABC. For each cohort a sample selection of each unit will be external quality assured by PIABC. The sample selection will be determined by PIABC in line with its centre assessment standard strategy and external quality assurance sampling policy. This will be undertaken before qualification certification. PIABC's centre assessment standard strategy will ensure that all centre devised and marked assessments remain fit for purpose and that criteria against which candidates' performance is differentiated are being accurately and consistently applied for this qualification.

These units have no grading; learners need to pass all the assessment criteria.

The pass threshold of these mandatory units is not subject to change.

MANDATORY UNIT (DPO4)

This unit should be predominantly assessed over time by natural observation in a production environment; this and other forms of supportive evidence should confirm ongoing and consistent competence over time. The Learner will successfully complete all the assessment criteria.

The Learner will be assessed on one type of polymer processing technique (e.g. extrusion, injection moulding, transfer moulding, material mixing/preparation, finishing/assembly operations, etc.).

The production environment for a polymer processing technique must not be simulated

The observations and any supporting evidence are internally assessed and internally quality assured by the Centre. For each cohort a sample selection of each unit will be external quality assured by PIABC. The sample selection will be determined by PIABC in line with its centre assessment standard strategy and external quality assurance sampling policy. This will be undertaken before qualification certification. PIABC's centre assessment standard strategy will ensure that all centre devised and marked assessments remain fit for purpose and that criteria against which candidates' performance is differentiated are being accurately and consistently applied for this qualification.

The Centre's assessments will be externally quality assured by PIABC.

This unit has no grading; learners need to pass all the assessment criteria.

The pass threshold of this mandatory unit is not subject to change.

MANDATORY UNIT (DPO5)

This unit should be predominantly assessed over time by natural observation in a polymer production environment; this and other forms of supportive evidence should confirm ongoing and consistent competence over time. The Learner will successfully complete all the assessment criteria.

The production environment for a polymer processing technique (e.g. extrusion, injection moulding, transfer moulding, material mixing/preparation, finishing/assembly operations, etc.) must not be simulated.

The evidence can be generated holistically from activities and assignments within other units, particularly DP04.

Assignments must incorporate aspects and examples of the learner's own production environment; including, procedures, processes, documentation, equipment, materials used, etc

Learners who have successfully achieved Functional Skills level 1 in maths or equivalent can use this as APA (Accreditation of Prior Achievement) towards Learning Outcome 2.

Learners who have successfully achieved Functional Skills level 1 in maths or equivalent can use this as APA (Accreditation of Prior Achievement) towards Learning Outcome 3.

The observations and any supporting evidence are internally assessed and internally quality assured by the Centre.

The Centre's assessments will be externally quality assured by PIABC. For each cohort a sample selection of each unit will be external quality assured by PIABC. The sample selection will be determined by PIABC in line with its centre assessment standard strategy and external quality assurance sampling policy. This will be undertaken before qualification certification. PIABC's centre assessment standard strategy will ensure that all centre devised and marked assessments remain fit for purpose and that criteria against which candidates' performance is differentiated are being accurately and consistently applied for this qualification.

This unit has no grading; learners need to pass all the assessment criteria.

The pass threshold of this mandatory unit is not subject to change.

MANDATORY UNIT (DPO6)

The Learner will be assessed on one type of polymer processing technique (e.g. extrusion, injection moulding, transfer moulding, material mixing/preparation, finishing/assembly operations, etc.)

The production environment for a polymer processing technique must not be simulated.

The knowledge and understating Learning Outcomes (LO1 & LO2) in this unit are assessed by completing assignments which are set, assessed and quality assured by the centre.

The assignments should be designed for a holistic approach to the assessment and confirm learners have a full contextualised understanding of all the assessment criteria.

Assignments must incorporate aspects and examples of the learner's own production environment; including policies, procedures, processes, equipment, and materials used. (Production environments must not be simulated for this unit).

The performance Learning Outcomes (LO3 & LO4) in this unit should be predominantly assessed over time by natural observation in a production environment, this and other forms of supportive evidence should confirm ongoing and consistent competence over time.

Centre assignments, observations and any supporting evidence are internally assessed and internally quality assured by the Centre.

The Centre's assessments will be externally quality assured by PIABC. For each cohort a sample selection of each unit will be external quality assured by PIABC. The sample selection will be determined by PIABC in line with its centre assessment standard strategy and external quality assurance sampling policy. This will be undertaken before qualification certification. PIABC's centre assessment standard strategy will ensure that all centre devised and marked assessments remain fit for purpose and that criteria against which candidates' performance is differentiated are being accurately and consistently applied for this qualification.

This unit has no grading; learners need to pass all the assessment criteria.

The pass threshold of this optional unit is not subject to change.

QUALIFICATION GRADING

This qualification is graded pass or fail only.

The overall grading structure for the qualification is not subject to change.

QUALIFICATION CERTIFICATION

To achieve the full qualification, PIABC Level 2 Extended Diploma in Polymer Operations (QN: 603/3796/5) learners need to successfully gain the 49 credits by completing the six mandatory units.

REGULATORY INFORMATION

Countries offered in:	England
Subject/sector area:	4.2 Manufacturing Technologies
Qualification operational start date:	31 October 2018
Qualification review date:	31 October 2021
Applicable age ranges (years):	16-18, 18+
